

Original example	2	-1	3	-2	2	2	1	-4	5	1
Weights	-1	-1	1	-1	1	-1	1	1	-1	1
Adversarial example	1.5	-1.5	3.5	-2.5	2.5	1.5	1.5	-3.5	4.5	1.5

Before perturbation:

$$-2+1+3+2+2-2+1-4-5+1=-3$$

The probability of class '1' : $1/(1+\exp(-(-3)))=0.0474$

After perturbation:

$$-1.5+1.5+3.5+2.5+2.5-1.5+1.5-3.5-4.5+1.5=2$$

The probability of class '1' : $1/(1+\exp(-2))=0.88$

The probability of class '1' increased from 5% to 88%
