

```

for (int v=0; v<V; v+=T_V)
  for (int g=0; g<G; g+=T_G)
    for (int f=0; f<F; f+=T_F)

```

Loop order -  $V \rightarrow G \rightarrow F \Rightarrow VGF$

```

parfor (int v1=0; v1<T_V; v1++) //parallel loop
  parfor (int g1=0; g1<T_G; g1++) //parallel loop
    parfor (int f1=0; f1<T_F; f1++) //parallel loop

```

$X1[v+v1][g+g1] += I[v+v1][f+f1] * W[f+f1][g+g1]$

*Spatial* ( $T\_Dim > 1$ ) / *temporal* ( $T\_Dim = 1$ )

Example:  $T\_V=4, T\_G=4, T\_F=1$

$V$  and  $G$  have spatial parallelism (s) and  $F$  is temporal (t)

Example representation:  $V_s G_s F_t$
