

Example:  $V_s G_s F_t$

```
for (int v=0; v<V; v+=T V)
  for (int g=0; g<G; g+=T G)
    for (int f=0; f<F; f+=T F)
```

Loop order - **VGF** ( $V \rightarrow G \rightarrow F$ )

```
parfor (int v1=0; v1<T V; v1++) //parallel loop
  parfor (int g1=0; g1<T G; g1++) //parallel loop
    parfor (int f1=0; f1<T F; f1++) //parallel loop
      X1[v+v1][g+g1] += I[v+v1][f+f1] * W[f+f1][g+g1];
```

*Spatial* ( $T\_Dim > 1$ )/*temporal* ( $T\_Dim = 1$ )  
 Example:  $T\_V=4, T\_G=4, T\_F=1$   
 V and G have spatial parallelism (s) and F is temporal (t)
