Murray Hill
New Jersey 07974
U.S.A.

Dear Dr. Sloane:

I should have mentioned in my previous letter that the counting series for homomorphically irreducible labelled trees was in neither your book nor its supplement. The series was useful in my recent work for checking the super diagonal of one of the tables. The formula appears in Meir, A. and Moon, J.W. *Mathematika*, 15, 1968, pp. 188-192. The series was not given numerically, but Ron Read computed the first few members for me as:

MAT

{1, 1, 0, 4, 5, 96, 427, 6448, 56961, 892720, 11905091, ...}

Doubtless it appears somewhere, but I was unable to locate it in the most likely spots.

[RE3]

Yours sincerely,

D. M. Jackson
